1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 30-34, 36-37 and 39-49 are rejected under 35 U.S.C. 102(b or e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Raj et al. (5,275,291) or Karow (6,230,893). Raj teaches blisters that interact with stop flaps or catch flaps 13 or 17 on the outer package. The structure of Raj is at least inherently capable (if not expressly so) of all of the claimed functions. Karow teaches a slotted and raised portion 106 of the blister card for also interacting with portions of an outer package as claimed. Note for example the description in column 4 last full paragraph and Fig 11. It would also have been obvious to use the packages of Raj and Karow as claimed for the purpose of providing for the

convenient dispensing of pills to a consumer. Additionally, it would also have been obvious to provide the packages of Raj or Karow with the elements of the product claims that are conventional in the relevant art, for the purpose of facilitating the construction of a more useful package.
